Online Symposium

DISINHIBITED BEHAVIOURS & DEMENTIA

Date: Friday, 18 June 2021

Time: 10:00am to 12:30pm (AEST)

Overview:

Disinhibited behaviours are actions which seem tactless, rude or even offensive.

They occur when a person's words and/or actions don't follow the generally understood social rules about what or where to say or do something. If a person living with dementia is disinhibited in their behaviour, this can attract attention to them and they may feel embarrassed or uncomfortable. It can be stressful for staff, families and carers too.
